Joseph Jayeoba
Frontend Developer

Years of evolvement in the tech space have brought so much but a constant demand has been effectiveness and simplicity. Those two words are my drive, I work towards building simple and effective systems to meet the need of the end-user.

- Software development life cycle(SDLC)
- Object oriented programming

WORK EXPERIENCE

Full stack developer intern
Classvisa

05/2022 - Present   *Remote*

Achievements/Tasks
- Integrated front-end elements into applications.
- Designed, developed and tested software applications.
- Learnt and worked with front-end technologies.
- Boosted web traffic by improving navigation and rectifying bottlenecks - reducing images sizes, and optimizing hooks.

Full stack developer
WIP

06/2021 - 09/2021   *Remote*

Achievements/Tasks
- Built APIs and data clients to consume APIs.
- Troubleshoot and tested software and debugged to clean up code and added up to 3% efficiency.
- Authored code and developed server-side logic in Python within Django framework.

PERSONAL PROJECTS

Airbnb Clone
- A web app simulating the appearance and some the feature of the airbnb website

House Of Pages (05/2022 - Present)
- An online book store dependent on google book API. It lets authorized users search for books, create a personal library, and download books for offline use.

Anagram Generator
- A python module that takes any combination of English letters as input and generates its anagram - every other word that can be formed using the letters in the given input.
